

In response to the Office Action of April 19, 2007, please amend the application as follows:

IN THE CLAIMS

Claims 1-16. (Cancelled)

17. (Currently amended) A greeting card that is capable of retaining an article there within and which, together with said article, is intended to be given by the owner of same to someone else as a unitary item, said article being later separable from said greeting card, said greeting card including:

 a first leaf;

 a second leaf, and

an expandable receptacle having a mouth through which the article to be retained may pass and a cavity located behind said mouth that is adapted to receive the article, said receptacle being located intermediate and connected to both said first leaf and said second leaf, whereby said first leaf is capable of hinge like movement relative to said second leaf between a closed position, whereby the two leaves overlie one another in a manner that at least partially closes said mouth, and an open position, whereby the two leaves are splayed apart thereby opening said mouth and enabling the article to pass through said mouth if so desired and wherein said receptacle includes two opposing jaws that are hingedly connected together by a common web and each jaw including one or more wall portions that when combined define a cavity that is adapted to receive the article and wherein said mouth is defined by the gap separating opposing wall portions of said respective two jaws remote from said web.

18. (Currently amended) [A] The greeting card as claimed in Claim 17, wherein said two leaves and said receptacle [being] are of unitary construction.

19. (Currently amended) [A] The greeting card as claimed in claim 18, wherein said two

leaves and said receptacle are constructed from a single piece of cardboard.

20-23. (Cancelled)

24. (Currently amended) [A] The greeting card as claimed in claim 18 [20], wherein said web resembles a spring and is adapted to urge the aforementioned opposing wall portions of said receptacle together such that they close about the article.

25. (Currently amended) [A] The greeting card as claimed in claim 19 [21], wherein said web resembles a spring and is adapted to urge the aforementioned opposing wall portions of said receptacle together such that they close about the article.

26. (Currently amended) [A] The greeting card as claimed in claim [22] 17, wherein said receptacle comprises a thin walled piece of molded cardboard having a generally "C" shaped transverse cross-section which is permitted to flex generally along an axis of symmetry.

27. (Currently amended) [A] The greeting card as claimed in claim [23] 17, wherein the article is a candle.

28. (Currently amended) [A] The greeting card including:

a candle;

a first leaf;

a second leaf; and

an expandable receptacle having a mouth through which said candle may pass and a cavity located behind said mouth that is adapted to receive said candle, said receptacle being located intermediate and connected to both said first leaf and said second leaf, whereby said first leaf is capable of hinge like movement relative to said second leaf between a closed position, whereby the two leaves overlie one another in a manner that at least partially closes said mouth, and an open position, wherein the two leaves are splayed apart thereby opening said mouth and enabling said candle to pass through said mouth if so desired and wherein said

receptacle includes two opposing jaws that are hingedly connected together by a common web and wherein each jaw includes one or more wall portions that when combined define a cavity that is adapted to receive said candle and wherein said mouth is defined by the gap separating opposing wall portions of said respective two jaws remote from said web.

29. (Currently amended) [A] The greeting card as claimed in claim [25] 28, wherein said two leaves and said receptacle are of unitary construction.

30. (Currently amended) [A] The greeting card as claimed in claim [26] 29, wherein said two leaves and said receptacle are constructed from a single piece of cardboard.

31-32. (Cancelled)

33. (Currently amended) [A] The greeting card as claimed in claim [24] 30, wherein said web resembles a spring and is adapted to urge the aforementioned opposing wall portions of said receptacle together such that they close about said candle.

34. (Cancelled)
